## CARBON FOOTPRINT AND AFT CELLULOSE INSULATION

A carbon footprint is the total greenhouse gas emissions caused by an individual, event, organization, service, or product, expressed as carbon dioxide equivalent. There are several factors that are used to measure carbon footprint including material production, manufacturing, use and end-of-life. Cellulose insulation is made of a minimum of 85% recycled material, giving it a naturally low carbon footprint. In addition to the recycled content of our cellulose, AFT has gone a step further and completed a Life-Cycle Assessment to see where we could further lower our carbon footprint and ensure our products are the greenest of the green. AFT has also committed to a completely carbon free electric supply. To learn more about carbon footprints and how AFT is working to protect our environment please visit our website, [www.advanced-fiber.com/carbon-footprint-faq/](http://www.advanced-fiber.com/carbon-footprint-faq/).

## CELEBRATING 20 YEARS OF MANUFACTURING AND GROWTH

- **2001**
  - 20 trailers
  - Single Shift
  - 22,500 sf owned
  - Cellulose insulation only
- **2021**
  - 200+ trailers
  - 3 shifts 7 days a week
  - 91,500 sf owned, 60,000 sf rented
  - Cellulose insulation, asphalt paving fibers, and industrial fibers

**It's hard to put into words the changes over 20 years and the gratitude to all who've been a part of this journey. Thank you! - Doug and Team**
